## Media Advisory

### First 400m<sup>2</sup> floating SPA to open to the public in Germany

Rostock 2007 – Showing its competence in building floating structures again, Aqua House built a floating spa for a luxury hotel right outside Berlin, Germany. Using RexWall panels / RexWall Resin® sandwich plates in the construction process allowed for the extremely low shell construction costs of 650.000 € (the finished structure had a price tag of about 950.000 €), while realizing outstanding thermal insulation and frost resistance properties of shell and pontoon.

Key to the project's low costs and superior technology is the material used in the construction process. The shell, including the pontoon, was made of RexWall Resin® sandwich plates, a universal construction material for floating objects, Aqua House® International GmbH developed in house. According to Dietmar Biessler, Director of Sales at Aqua House International GmbH, "the material allows for advanced design and technologically superior construction of pontoons and other floating structures."

Information about products and company, particularly about extremely robust and flexible low-cost house applications using the same material technology as described above can be obtained at [www.aquahouse.net](http://www.aquahouse.net) or contact Aqua House International GmbH, Mr. Dietmar Biessler at +49 (0)382 04 766 0 or press [at] rexwall.com
